Tyrone Showers
Project Manager/Group Leader
EHN

Dear Tyrone:

I would like to take this opportunity to thank you for your hard word and leadership on Expedia.com. As Project Manger, your diligent hard work on this project provided support of our corporate goals.

I personally congratulate your vision and ability to inspire your team. You create a positive team-oriented environment for your team-members, allowing Worldspan, in conjunction with Microsoft, to deliver something special to the Internet community.

Your idea to use Sterling's Cool:Gen to make use of current resources shows innovation and commitment. I was pleased to hear that the design for Tandem messaging provided by your team exceeded Microsoft's expectation.

In an effort to show our appreciation, please accept the attached token of gratitude for your role in delivering a quality product. I am extremely proud that you are a member of our team.

Sincerely,

Jeff

Mr. James F. Abbott
Executive Director
The Minority Supplier Council
3017 Main Street, Suite 100
Kansas City, MO 64108

Mr. James F. Abbott:

Mr. Tyrone Showers of Taliferro, Inc., currently performs the computer programming and network maintenance for McDaniel Hazley Group, Inc.

As you can image, computer applications play a vital role in the day to day operations of our office. To say the least, MHG is absolutely pleased with the outstanding service and responses provided by Mr. Showers. Furthermore, the entire staff has received excellent hands-on attention from Tyrone.

The McDaniel Hazley Group, Inc. is very pleased with our relationship, and as members of the Minority Suppliers Council, would not hesitate to recommend Mr. Showers services.

Sincerely,

John McDaniel

SUBJ: Second Quarter Award of Excellence

It gives me great pleasure to recognize the following Second Quarter Award of Excellence nominees for cost center 110.

Neal Dowdy has been nominated for his efforts associated with the excellent Customer Service he has provided on the ABACUS project.

Doug Haas has been nominated for his contributions to the Special Function Name List Project.

Brian Kaperas' nomination is in recognition for his overall accomplishments as the Group Leader in the Ticketing Area.

Kathy Kirks' nomination is in recognition of her efforts as the Project Leader of the Six AA Project.

Darren Lee has been nominated as recognition of his efforts associated with the expansion of the Car Chain Table project and for the Equal Host SSR/Name Change enhancements.

Tyrone Showers nomination is a result for his efforts in the End Transaction area which include CSR evaluations, SOR fixes, and a PNR history feasibility study.

In recognition of their second quarter accomplishments, the nominees and their managers are invited to a noon lunch on Thursday, June 28th, at the North Gardens Restaurant.

Subject: EAGLE Award

Tyrone,

It is with great pleasure that I present you with an EAGLE for the outstanding work you did on solving the PNI corruption problem. It was truly a case of finding a needle in a haystack! Your dedication and determination to solve this problem has in fact solved many of the outstanding SORs in our area! And the best part of all was that the problem was not even in our area!

I just hope I can continue to find challenging problems like this for you to work on! Thanks for a job well done, and I'm proud to have you on my team!

October 24, 1995

Dear Tyrone,

On September 29, 1995, a system problem occurred which led to corruption of a small portion of the customer critical data on the WORLDSPAN online system. Without immediate attention, this problem could have escalated into a major event with far reaching repercussions for WORLDSPAN and our system participants. Through the timely, professional response of the members of the Operations and Technology staff, we were able to isolate and contain the damage, and immediately begin the rebuilding of the WORLDSPAN online system's data base integrity.

During this time of danger, I was reassured to hear the alternatives being discussed, the actions being taken, and the progress being made. Tyrone, I would like to take this opportunity to thank you for the contributions you made, especially your staff coordinating efforts for the PNI Shuffles the first weekend and your ongoing efforts to resolve the final data base issues.

Although the data base problem was unfortunate, the response to it by you and your peers again demonstrates the outstanding innovation, dedication, and teamwork we have at WORLDSPAN. I am extremely proud to be a member of the best team in the business.

Sincerely,

Mike

Taliferro introduces WebwareLive

Software helps businesses track activities

Taliferro, Inc., a newly established software firm based in South Florida, has launched webwareLive, an Internet-based program that enables companies to keep track of work tasks, activities and orders, from start to finish, announced Tyrone Showers, Taliferro's chief technology architect and principal.

Tyrone Showers

"Communication is key to running any business," says Showers. "You've got to be sure everyone on the team knows what to do and when to do it."

When the bridal registry of a major retailer receives an order, webwareLive instantly alerts all parties in the workflow, from the crystal and china department to gift-wrap, billing and shipping. The alert symbol changes color as each task is completed. Everyone on the team can view the progress of the order until it is complete. WebwareLive can even track the money trail from customer prospect to customer payment.

There is no hardware or software to buy or install. A simple, monthly fee includes training, one-day implementation and use of the program. In addition, documents can be attached to any profile, activity or employee.

Taliferro, Inc. is based in Sunny Isles Beach, FL. The company specializes in developing Internet applications for professional services, insurance and retail industries, capital management, sports, and travel and hospitality. For a preview of the new software program, go to www.webwarelive.com.

Webware *Live* for all your Business Needs

by Arlene Hauben
Contributing Writer

Taliferro, Inc., a newly established software firm based in South Florida, has launched webware*Live*, an Internet-based program that enables companies to keep track of work tasks and orders, from start to finish, announced **Tyrone Showers**, Taliferro's chief technology architect and principal.

"Communication is key to running any business," says Showers. "You've got to be sure everyone on the team knows what do and when to do it."

At **Vivendé**, an upscale travel agency in Miami, webware*Live* helps sales representatives and agents handle orders from "high profile" clients when they request travel arrangements. The software program's unique color-coded alert system is key to tracking a work order and making sure it is properly completed. Although Showers designed the computer program to Vivendé's specifications, the program is adaptable to any business that wants to pass on information from one department to another.

"Webware*Live* is the most complete and up to date concierge program that I have ever used in the travel industry," says **Michael Keister**, Vivendé's president. "The program guarantees our ability to meet every clients' request, whether last minute or long range."

Webware*Live* is adaptable to any industry. For instance, when the bridal registry of a major retailer receives an order, webware*Live* instantly alerts all parties in the workflow, from the crystal and china department to giftwrap, billing and shipping. The alert symbol changes color as each task is completed. Everyone on the team can view the progress of the order until it is complete. Webware*Live* can even track the money trail from customer prospect to customer payment.

"The program is Internet based so you can see the tasks from out of the office," notes Showers, a computer scientist for 22 years who supervised the development of **Expedia.com**. "Tasks flash on the screen and are color coded, so that every manager, sales representative, or executive knows where the activity is and when it's resolved or completed."

According to Showers, companies are increasingly concerned about maximizing efficiency. When a company approaches a software firm about automating a business process, there are generally three options: build, buy, or leave as is. Sometimes, existing software may not exactly fit their needs. Adds Showers, "The software you use should be based on how work flows in your company."

Webware*Live* provides the most flexible Internet based software application with an affordable subscription price. Businesses can acquire technology improvements within budget. With webware*Live*, project status is clean and communication is improved in real-time. This allows the company to concentrate on serving their clients.

There is no hardware or software to buy or install. A simple, monthly fee includes training, one-day implementation and use of the program.

"In businesses where accuracy of information and speed of service are critical to getting the job done, user-friendly webware*Live* guarantees that the business resolves each activity on time, on track and on budget," adds Showers. In addition, documents can be attached to any profile, activity or employee.

Taliferro, Inc. is based in Sunny Isles Beach, FL. The company specializes in developing Internet applications for professional services, insurance and retail industries, capital management, sports, and travel and hospitality.

Tyrone Showers, principal of Taliferro, Inc. is the creator of the WebwareLive software program. For a preview, go to www.webwarelive.com. Showers can be reached at ty.showers@taliferro.com. For more information please call 1-877-386-3239.

WebwareLive automates business activities

Ever wonder how an assignment is progressing and not know its true status until there's a problem that jeopardizes the project? No matter where you travel, it's important to know the status of company tasks and projects.

When a company approaches a software firm about automating a business process there are 3 options: build, buy, or leave as is. Sometimes, the software may not exactly fit your needs. The software you use should be based on how work flows in your company.

My goal in creating WebwareLive was to provide the most flexible Internet based software application with an affordable subscription price to help businesses acquire technology improvements within budget. With WebwareLive, project status is clear and communication is improved in real-time. This allows your company to concentrate on serving your clients.

Tyrone Showers, principal of Taliferro, Inc. and creator of the software program.

KEEPING TABS: Tyrone Showers is the brains behind Taliferro, Inc.

IT survivors finding new niches

By Sherri C. Ranta

South Florida's IT survivors, like software and computer systems developers Taliferro Inc. and Think Technologies, are finding new business in the sector deflated by bad investments and bankruptcies.

Like many information technology professionals, Tyrone Showers, a software engineer specializing in web-based software applications, worked through the late 1990s and early 2000 – the nation's information technology boom.

His expertise was in demand as he first managed web-based projects at Worldspan, provider of reservation information to travel agencies and online services such as Expedia. Later, he became chief technology officer at Echobridge, working on a huge project with Johnson & Johnson.

But when the markets fell and funds disappeared, Mr. Showers said, there were no corporate positions in sight. A consulting job this year led to his decision in May to start his own company, Taliferro Inc. in Sunny Isles Beach.

"You want to control your own destiny. I've worked for four companies down here and they all don't exist anymore," he said. "Each time, you didn't know you didn't have a job until you showed up at work that day."

The company, Mr. Showers said, provides a proprietary Internet-based activity management software – called webwareLive – for Vivende, a Miami-based online travel agency, Blair Capital Management in Chicago and Miami International Wine Fair.

For a fee, companies can use the software to keep track of work tasks, activities and orders. The monthly fee includes training, one-day implementation and use of the program, he said.

What's unique about the company, Mr. Showers said, is the multi-cultural mix of players. The company's angel investor is Jewish and from the United Kingdom. Like many angels, Mr. Showers said, his angel doesn't know a lot about technology "but he believes in me."

"We're a virtual company," Mr. Showers said. "We use the product to communicate so we really don't need an office."

Since leaving his last corporate position, Mr. Showers, like many former IT workers, has endured lean economic times. He says he plans to continue marketing the product.

What will happen to Taliferro? Mr. Showers said a larger company may come along and buy the technology, but for now he wants to see where the company can go.

Think Technologies in Coral Springs, a computer systems and software development firm established in 1997, knows hard times. A large client went belly up during the dot.com fallout, leaving Think Technologies with an unpaid six-figure debt, said company president Andrew Davies.

Committed to the company, he and other principals contracted themselves out for three months to restore funds to the firm.

'You want to control your own destiny. I've worked for four companies down here and they all don't exist anymore'

Tyrone Showers

"It's not the end. You can survive something like that if you're dedicated," Mr. Davies said.

Since those lean times, the company continues to grow, client by client, and has grown to a workforce of about 11, providing project design, management and implementation for clients such as Gladys Kidd & Associates, 2121 North Bayshore Drive in Miami and the solid waste authorities of Palm Beach and Broward counties.

In this economy and business environment, Mr. Davies said, companies have to get back to the basics – providing value and a higher quality of work than what was being produced two years ago.

"If you're not really, really good at what you do, you get eliminated."

Mr. Davies said demand is picking up, but he's taking things slowly. "If it was 1999, we would be hiring like crazy now – but caution is the key."

The company, he said, was built on revenues. "We had no magical investors."
