Overview

Most organizations don't have a talent problem. They have a systems problem.

Taliferro Tech builds AI-powered systems that remove manual work, reduce operational drag, and keep momentum moving—without adding headcount. We design and deploy SaaS platforms, automation, and responsible AI frameworks that take work off people, not add more tools for them to manage.

Our focus is simple: let computers do the work humans shouldn't be doing.

Core Services

AI-Driven Solutions with Measurable Impact

We lead with AI that actually performs work. From equity-centered AI policy for government to workflow automation for private organizations, our systems replace repetitive effort with reliable execution.

We don't experiment in production. We deploy systems that work.

TODD — AI-Powered Contact & Outreach Automation

TODD (Tactical Outreach and Data Development) is our flagship product.

It isn't software that tracks work. It's an automated assistant that does the work. TODD handles:

- Contact management
- Email outreach
- Data enrichment and validation
- Automated follow-ups
- Predictive next-step recommendations

The result: fewer dropped balls, cleaner data, faster movement, and less admin overhead. Teams stop chasing tasks and start making decisions with confidence.

Success Stories

Telecom AI Automation - Reduced response times by 70% using AI-driven communication and smart escalation.

Vendor Matchmaking for Diversity - Used NLP and automated matching to connect minority-owned vendors with construction projects in Pennsylvania.

Sales & Marketing Data Integration - Unified systems via API to improve targeting accuracy and campaign speed.

Sustainable Brewing Operations - Built cloud-based energy monitoring and reporting to support environmental goals.

Flooring Business Operations - Improved lead tracking and job scheduling using automated contact workflows.

Biotech Lab Modernization - Delivered a custom Laboratory Information System to streamline operations, enable self-serve testing, and improve doctor–patient communication.

Developer Portal & API Governance - Led secure API design, governance, and external documentation for a telecom developer ecosystem.

Differentiators

- **AI Assistants That Work Like Departments:** We don't just build tools—we deploy systems like TODD that replace entire categories of manual effort: outreach, data cleanup, follow-ups, and coordination.
- **Bias-Fighting Algorithms and AI Policy Leadership:** Our AI frameworks identify and reduce bias in real-time systems. Equity is operational, not aspirational.
- **Purpose-Built Tools:** Every solution is designed from the ground up to solve a specific problem. No reskins. No white-label shortcuts.
